

The **EkeLoad** beams allow for two-layer loading, also from the side.

With an intermediate wall and 2-temp. cooling unit it's possible to divide the loading space into two compartments.

We are offering slider and cantilever tail lifts.

On the FNA and FRC products it's also possible to have a waste water tank with outlet valve.

FRC

FNA/FRC is a versatile transportation unit well-suited to the transportation of foodstuff, parcelled goods and industrial loads. This makes it easier to take return loads and minimise empty driving.

All our ATP type approved FNA and FRC bodies are available with a fully opening side, equipped for multi-temperature purposes with different kinds of intermediate bulkheads. The bodies fulfil all the strict quality requirements for transportation of foodstuff, and have a very competitive unladen weight.

FRC products are available on the following chassis types:

CENTRE-AXLE TRAILERS

STEP-FRAME SEMI-TRAILERS

DRAWBAR-TRAILERS

CITY SEMI-TRAILERS

SEMI-TRAILERS

TRUCK BODIES
